

FUSION

Fuel Treatment

**FOSSIL FUELS ARE THE MOST
SUSTAINABLE FUELS IN THE WORLD
WHEN BLENDED WITH**

Fusion Fuel Treatment

**Fusion Fuel
Treatment:
Exceeds 2040
Global Emissions
Aspirations
immediately
when used with
any fuel in any
engine**

**ENHANCE YOUR FUEL ECONOMY
AND TURN YOUR FUEL SAVINGS
INTO BUSINESS PROFITS**

Fusion Fuel Treatment is an institutionally tested product that has been proven to achieve all the advertised benefit.

Commercial agencies, Trakindo, CAT, and globally renowned Intertek, have all tested and reported results that exceed our claims.

Fusion Fuel Treatment helps engines use fuel more efficiently while cutting down toxic emissions. Its advanced formula keeps fuel density steady, leading to a cleaner and stronger combustion. Developed through years of testing, it remains the only treatment that complies with European EN-590 requirements.

Our Market

Fusion Fuel Treatment has a presence in **over 70 countries across 5 continents**

Conforms to European EN 590 Standards

The world is focused on producing more sustainable alternative fuels. Fossil fuels blended with Fusion are now the most sustainable fuels in the world, and in abundance now and for the foreseeable future. As a fuel treatment, Fusion Fuel Treatment is the most commercially viable cost effective solution to the emissions dilemma facing global politics and our populations today.

HOW IT WORKS ?

CAVITATION

Fusion dissolves the effect of cavitation and agitation in fuels, that are the main cause of contamination and emissions.

CARBON DEPOSIT REMOVAL

Oxytane® keeps a combustion chamber cleaner and by doing so, restores economy and performance beyond it's original manufacturers specifications making an engine more efficient and economical with reduced emissions

CLEANING

Fusion Fuel Treatment removes contaminants from fuels that cause emissions rendering fuel cleaner, leaner and denser enabling fuels to burn more for energy, increasing fuel economy while substantially reducing emissions.

Save on Fuel

Using Fusion in fossil fuels significantly enhances fuel economy, delivering substantial savings and boosting profitability for customers

International Standards

Specifications Conform to European EN 590 and international ASTM standards - as safe as putting regular fuel in any vehicle/engine.

Engine Protection

Cleans carbon built up in a combustion chamber. Restoring and exceeding the original performance and economy.

Application

Easy to use. Just pour the correct measure straight into your fuel tank after every refill.

Smoother Ride

Enjoy a smoother driving experience with a more responsive throttle with less engine noise and vibration.
